

The course focuses on the requirements of the medical technology and experienced software developers in the medical device industry. The implementation of the IEC 62304 standard implies a variety of challenges, which we will address in this training course in a practical manner. You will learn various methods and strategies, which we have already successfully implemented due to many years of experience in software development, and thus receive a broad repertoire of possibilities, which you can use in the context of your projects.

Duration: 1 Day

Language: English or German

Course Content

- Risk management methods in software development
- Strategies in requirement management
- Strategies for IEC 62304 and compliance with FDA guidelines
- Agile software development in IEC 62304 projects
- Software verifications: methods and strategies
- Continuous integration in IEC 62304 projects
- Cybersecurity strategies
- IEC 62304 process improvements
- Strategies for safety-critical systems

Who Should Attend?

Software engineers, compliance engineers, quality engineers

Prerequisites

This course is suitable for experienced software developers or can be customised to meet your needs.

Training Schedule

Training typically runs for 8 hours each day, including a one hour lunch break and two shorter breaks in the morning and afternoon. This can be adapted as required to meet specific business requirements.

Price: £500 per person per day for a minimum of 2 and up to 7 participants. Thereafter a discount will be applied for additional participants

To Book

For a convenient and cost effective training solution, we can work with your organisation to develop bespoke training to meet your exact requirements.
